

SOLVE A REAL PROBLEM

Build Better Operations.

We build intelligent software and hardware products that improve how organizations operate — for factory floors, government offices, and engineering teams.

*The future of AI isn't better conversations.
It's better operations.*

MOST SOFTWARE STOPS AT THE SCREEN

Organizations don't need another impressive demo. They need technology that survives contact with the real world.

01

Manual Work

Workflows still depend on repetitive human effort.

02

Disconnected Systems

Data exists across tools, machines, documents, and people.

03

Slow Decisions

Critical information arrives too late.

04

Technology That Doesn't Fit

Generic software rarely matches the way an organization actually operates.

WHAT WE BUILD

Products for real operations.

Edge Intelligence

AI running close to where work happens.

Computer Vision

Turn physical environments into measurable systems.

Industrial IoT

Connect machines, environments, and operational data.

Intelligent Software

Turn complex workflows into systems that execute, learn, and improve.

From factory floors and government offices to engineering teams, we build systems that automate repetitive work, improve decision-making, and scale with your business.

PROOF OF WORK

Systems already running.

10

Products in the field

6

With measured,
reported results

GOVERNMENT OPERATIONS

Glaucon

A multi-agent government relations research system, built for teams whose decisions depend on knowing what policy is about to do.

60% reduction in prep time

WORKPLACE OPERATIONS

SafetyFirst

An OH&S platform that predicts workplace incident probability over the next seven days, so prevention has somewhere specific to go.

7-day forward prediction

KNOWLEDGE OPERATIONS

SkillsClaw

Turn recorded workflows and standard operating procedures into production-ready AI skill definitions that agents can actually run.

BUSINESS OPERATIONS

RFQ Agent

A multi-agent procurement system that watches public tender sources, scores every opportunity against fit, and drafts the proposal.

0-100 LLM fit score

BUSINESS OPERATIONS

Renzo

An AI-first engineering system that accelerates frontend delivery for services teams working across many concurrent client codebases.

RESEARCH AND DATA

Iota

Personalised grant discovery that surfaces the funding opportunities a specific researcher is actually eligible for.

FIELD OPERATIONS

WildTrack

Wildlife tracking and reporting that routes field observations to the authority responsible for acting on them.

2nd Prize, Eco Hack 2022

APPLIED INTERFACES

Aurora

A voice AI training tool that simulates donor conversations, so teams can practise the interaction before it costs them a relationship.

30% increase in conversions

APPLIED INTERFACES

FoodLens Agent

A restaurant photo enhancement agent: a dish photo goes in, marketing-ready imagery comes out.

6 style presets

APPLIED INTERFACES

Style Me Agent

AI hairstyle recommendation that reasons from face shape rather than from whatever is trending.

7 face shapes analysed

Have a real operational problem?
Let's solve it.
